Frustrated
Cutting

Clinicians have stated...

Crowns that contain a zirconia coping often take
20-30 minutes to remove when they use
standard diamonds and carbide burs.

Using Great White[®] Z Diamonds...

Complete crown removal procedures in **3-5 minutes** through zirconia.

Annually, clinicians who remove 125 crowns that contain zirconia copings will

Save 6-9 hours Per Year.*

Images Not Shown to Scale

35% of All Crowns Placed Have Zirconia Copings

Failure rates on Zirconia based crowns have been shown to be between 7-13% after four years of placement.* Clinicians have stated it takes 20-40 minutes* to remove a crown with Zirconia coping and 10-15 minutes* to create endodontic access through crowns with standard carbides or diamonds.

Great White®Z Cuts Zirconia Much More Efficiently

Great White®Z Diamonds are manufactured with fine diamond particles and a proprietary diamond bonding technique which has been shown to reduce micro-fractures, vibrations and have increased patient satisfaction.

Initial Endodontic Access Through Zirconia

Zirconia Crown Removal

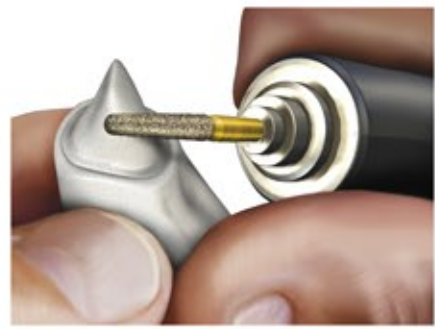

Tested by Professionals...

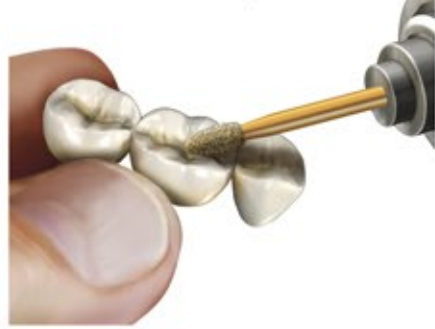

"I highly recommend Great White®Z Diamonds, they will cut significant time from zirconia crown removal procedures while reducing stress, usually with just one diamond."
